

HDV 2000

HEAVY DUTY VEHICLE WASH

HDV 2000 is a superior combination of penetrating agents, water conditioners and coupling agents. It attacks and saturates caked soils, dried on dirt, mud and road film much faster than ordinary car washing compounds. It lifts off dirt and grime even when mixed with the hardest water.

HDV 2000 can be used with or without pressure spraying equipment, but for maximum efficiency and ease of application a pressure sprayer having 150 to 250 psi nozzle pressure should be used. **HDV 2000** rinses and dries spot free so that it is only necessary to chamois windows and chrome; SIERRA CHEMICAL, INC. makes it that way to save you time and labor.

HDV 2000 needs no dissolving because it is already in liquid form and can not clog valves and nozzles. It will not streak or dull the finish of any vehicle when used as directed.

FEATURES

- * Effective on Road Film
- * Biodegradable
- * Fast Cleaning
- * Non-Streak Cleaning
- * Highly Concentrated
- * Easy to Use

DIRECTIONS

Dilute **HDV 2000** 1:20 to 1:100 depending upon use temperature of water and spray nozzle pressure. The use-dilution should also be varied depending upon the type of cleaning being done. Spray on and rinse clean.

For use without pressure equipment, dilute **HDV 2000** 1:60. Wet the entire vehicle thoroughly to remove loose soil. Then apply diluted solution of **HDV 2000** to 1/3 of vehicle. Wash with sponge, cloth or soft bristle brush, then rinse clean.

Vary the amount of **HDV 2000** to suit the soil for most economy and effectiveness - less for cars and more for trucks and buses.

PRODUCT SPECIFICATIONS

Color	Amber
Odor	Typical
Specific Gravity	10.7
Weight per Gallon	1.112 lbs
Biodegradable	Yes
Solvents	None
