

META BRITE **INDUSTRIAL STRENGTH METAL** **BRIGHTENER AND CLEANER**

PRODUCT SPECIFICATIONS

Color:	Clear Blue
Specific Gravity:	1.115-1.120
Detergency:	Good
Solubility in Water:	Complete
Odor:	Sweet
Flash Point:	None
Emulsification:	N/A
PH:	<2

META BRITE is a concentrated formula designed for rapid removal of oxides and silicate stain from recycled water and other deposits on metal surfaces, including aluminum. It is a balanced formula that penetrates and dissolves oxidized surface film, bringing out metals natural luster. **META BRITE** is recommended for continuous maintenance of aluminum and stainless steel, highway trailers, aluminum body busses, concrete mixers, mobile home and aluminum building panels. Regular maintenance programs using **META BRITE** will guarantee an attractive, clean appearance.

AREAS OF USE

META BRITE is also recommended for use in cleaning industrial areas where metals have become oxidized through exposure to the elements or corroded and impacted from contact with various chemicals such as salts with low solubility such as calcium sulfate or silica/silicates. Especially effective on brightening painted surfaces (Drum Brightener) as well as base metals.

DIRECTIONS

META BRITE is a concentrated acid cleaner, which is designed to be diluted with water up to 20:1 for light duty metal brightening. Dilution ratios as low 5:1 are recommended for extremely corroded surfaces. Apply META BRITE to the metal surface to be cleaned, starting from the bottom and working up. Allow approximately ten minutes of contact time and then thoroughly rinse with water from the top down. META BRITE should be applied only to hard material surfaces. Never on glass or chrome metal.
