

SC400-L HEAVY DUTY DEGREASER

PRODUCT SPECIFICATIONS

Odor:	Butyl
Specific Gravity:	1.040
pH:	13.2
Biodegradable:	Yes
Flash Point:	None
Solubility in water:	100%
Phosphates:	None
Biodegradable:	Yes

SC400-L is a powerful alkaline liquid cleaner developed for use in steam cleaning and hot tank degreasing. **SC400-L** is composed of strong alkalis and alkaline builders, water softeners, emulsifiers and synthetic wetting agents. Its unique composition is strong enough for tough jobs, yet safe for sensitive aluminum and other soft metals and most painted surfaces as well as being safe to the user at recommended dilutions. **SC400-L** has the unique ability to eliminate stains and malodors in a heavy duty degreaser.

SC400-L contains synthetic surfactants which are power activated to produce quick penetration, high foaming and easy rinsing. It removes caked grease and oil from metal and masonry surfaces and holds them in suspension for free rinsing. **SC400-L** contains water softening agents to keep machine coils and other components clean and deposit free virtually eliminating the need for frequent descaling.

SC400-L was designed for use in refineries, petrochemical plants, machine shops, drilling rigs and foundries where solvent-based products are not recommended for use due to flash point concerns or chemical incompatibilities issues. **SC400-L** can be used in automatic floor scrubbers if properly diluted.
